

Task 2: Equality Score Analysis Report

1. Objective

The objective of this task is to analyze employee compensation equality scores across factories and job roles, and classify them into fairness categories using Excel-based logic.

2. Dataset Description

The dataset contains three columns: Factory, Job Role, and Equality Score (ranging from -100 to +100).

3. Methodology

A new column 'Equality Class' was created in Excel to categorize each score based on its value. The classification was done using Excel IF() and ABS() functions.

4. Classification Rules

Fair: -10 to +10

Unfair: -20 to -10 OR 10 to 20

Highly Discriminative: less than -20 or greater than 20

5. Formula Used

=IF(ABS(C2)<=10,"Fair",IF(ABS(C2)<=20,"Unfair","Highly Discriminative"))

6. Conclusion

This classification helps identify imbalance patterns in employee compensation and can support fairness audits and HR decision-making analysis.
